EAST GIPPSLAND SHIRE COUNCIL SUNSET COVE JETTY REBUILD

PROJECT OVERVIEW

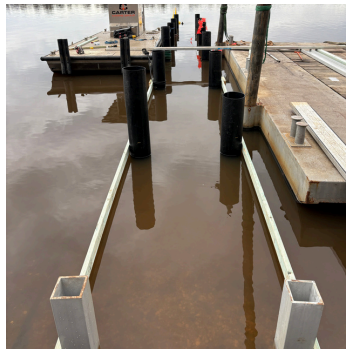

The Sunset Cove Jetty Rebuild was a key infrastructure project commissioned by the East Gippsland Shire Council to restore safe and functional public access to one of the region's most popular waterfront destinations. The existing jetty had been closed for an extended period due to structural deterioration, limiting community use and affecting local tourism.

Anchor Products designed and supplied a new Fibre Reinforced Polymer (FRP) modern jetty structure that prioritises longevity, safety, and minimal environmental impact. Utilising high strength, corrosion resistant FRP components the rebuilt jetty will offer superior durability in marine environments, reducing long-term maintenance costs for Council and ensuring the structure can withstand harsh coastal conditions.
