# GLAWAC ROUND HEAD EROSION PROTECTION

## PROJECT OVERVIEW

Round Head, on the western shore of the Gippsland Lakes, is a culturally significant site for the Gunaikurnai people, containing ancestral middens and ceremonial places dating back thousands of years. Increasing erosion, driven by wave exposure, boat wake, vegetation loss, and altered lake dynamics, has placed these heritage areas at risk, with previous revegetation efforts proving ineffective.

In partnership with Gunaikurnai Land and Waters Aboriginal Corporation (GLaWAC) and Carter Marine Group, Anchor Products delivered a low impact shoreline protection system using PVC sheet piling and FRP retaining structures designed to stabilise the coast without permanent concrete works. Traditional Owners were embedded throughout the project, guiding decisions and protecting cultural heritage, creating a strong and collaborative model where engineering solutions support long term care for Country. We look forward to monitoring this project and future protection works with these great partners.

# ANCHOR PRODUCT OVERVIEW

## AnchorGrate

- Mini Mesh, Light Grey - RAL 7035  
ISO Resin, Non-Slip Grit Surface,  
UV inhibition, Fire Retardant

## AnchorMax

- FRP Pultruded Square Hollow Section- Light Grey - RAL 7035, UV inhibition, Fire Retardant

## AnchorSheetPile

- PVC SU525 Sheet Pile - W: 525mm, D: 160mm, 8mm Wall Thickness. Corrosion resistant. RAL 7035

**BEFORE**

**AFTER**

*We're proud to partner with Carter Marine Group and the Gunaikurnai Land and Waters Aboriginal Corporation (GLaWAC) to deliver a shoreline protection project at Round Head, a site of immense cultural and ecological significance on the Gippsland Lakes.*

*This collaboration isn't just about marine infrastructure and Fibre Reinforced Polymer (FRP). It's about working in partnership with Traditional Owners to protect cultural heritage, heal Country, and ensure future generations can walk the same sands as their ancestors.*
